Subject: RE: section 319 in Colorado

Hi Paula, After a particular year's 319 grant to the State is closed, there is no follow-up requirement by the State or by the local project sponsor. So usually we only get a year or two of post-project monitoring. That data will be submitted to the State and STORET. Since the Animas group is active on their own, they still may be collecting their own samples for analysis. They are also likely to have submitted those data sets into the Colorado Data Sharing Network. Here is the link: <http://www.coloradowaterdata.org/>

Marcella said that USGS does a lot of monitoring there as well and their data is in NWIS, but you probably already knew that. Peter

Subject: section 319 in Colorado

Peter – Question: can you tell me what the rules or guidelines are for follow-up evaluation of Section 319 projects? Is that a required element of any 319 project or is it dependent on the specific situation? If so, how frequently would any follow-up monitoring occur? Is that data submitted to the State WQD section 319 program?

Just wondering since we are beginning to scope a “global” RI for the Upper Animas watershed and “re-evaluation” of areas that ARSG has “cleaned up” is on our radar screen.

Thanks.

Paula Schmittziel
